Business Alerts & Notifications — Recommendations Report

Generated: 06 May 2026, 10:48 AM

This report outlines recommended alerts and notifications for the Rainbow Grocery Inventory Management System. Alerts are grouped by category and prioritized by business impact. Each alert includes the trigger condition and the business reason for its importance.

■ Stock Alerts — ■ Critical (Must Have)

Alert	Trigger	Business Reason
Zero Stock	current_stock = 0	Shelf is empty — customers leaving without buying, immediate revenue loss
Negative Stock	current_stock < 0	Already exists in your data (e.g. -442). Sales recorded but stock not updated
Reorder Point	Stock covers less than 3-5 days of sales	Alert before stock hits zero. Gives time to reorder before running out
Expiry Risk	High stock + no sales for 30+ days	Items sitting too long — risk of spoilage/expiry, critical for grocery items

■ Stock Alerts — ■ Important

Alert	Trigger	Business Reason
Overstock Alert	current_stock > 3x threshold	Cash stuck in inventory, storage cost wasted. Indicates over-ordering
Slow Moving Stock	High stock + sales below 50% of average	Overstocked, risk of expiry. Needs promotion or price reduction
Dead Stock	Zero sales for 2+ consecutive months	Items no longer selling — consider discontinuing or running clearance sale
Stock Discrepancy	Expected stock vs actual differs by >10%	Possible theft, counting errors, or unrecorded damage. Needs investigation

■ Sales Alerts — ■ Critical (Must Have)

Alert	Trigger	Business Reason
Zero Sales This Month	quantity = 0 for current month	Item not selling at all — is it on the shelf? Pricing issue? Unrecorded stockouts
Sales Drop > 30%	This month < 70% of last month	Sudden drop — competitor pricing, supply issue, customer complaint. Needs investigation
Consistent Low Sales	Below threshold for 3 consecutive months	Chronic underperformer — consider discontinuing, repricing, or replacing with better item
Best Sellers Running Low	Top 10 items by sales with low stock	Highest revenue risk — these items generate most income, must never run out

■ Sales Alerts — ■ Important

Alert	Trigger	Business Reason
Sales Spike	This month > 150% of average	Unusual high sales — great news but restock fast before running out of top sellers
Store vs Store Gap	Same item sells 3x+ more in one store	Store-specific problem — display, pricing, staff training, or local demand differences
Seasonal Drop	Sales lower than same month last year	Year-over-year trend — identifies if business is growing or declining
Revenue at Risk	Low stock x unit price calculation	Shows PKR value of revenue lost if item runs out — prioritizes reorder by financial impact

■ Combined Stock + Sales Alerts (Most Valuable)

Alert	Trigger Logic	Business Reason
■ Urgent Reorder	Low stock + High sales	Item flying off shelves, will run out in days. Highest priority reorder
■ Dead Inventory	High stock + Zero sales	Stop ordering this item. Run promotion or clearance to free up cash and store space
■ Phantom Stock	Stock shows available but zero sales for 30 days	Items may be misplaced, damaged, expired, or mislabeled on shelf
■ Healthy Item	Stock ok + Sales ok (both above thresholds)	Establish healthy item — use its stock/sales ratio as reference for managing other items

■ Store-Level Alerts (Head Office View)

Alert	Metric	Business Reason
Store Health Score	% of items performing well per store	Rank all 11 stores — identify which stores need management attention
Worst Performing Store	Most low stock + low sales combined	Focus resources and visits on underperforming stores first
Store Stock Value	Sum of (stock x unit price) per store	Which store has most cash tied up in inventory — optimize buying
Store Sales Ranking	Total quantity sold per store this month	Which stores are generating most revenue — reward and replicate success

■ Time-Based Scheduled Alerts

Schedule	Status	Content
Daily 8:00 PM	Current (Live)	Low stock + Low sales email to Head Office
Friday Alert	Planned	Before weekend — ensure high-selling items are stocked for weekend rush
Weekly Digest (Monday)	Planned	Full week summary — what needs attention, top performers, worst items
Monthly Report (1st)	Planned	Complete month analysis — all stores, all items, trends, recommendations

■ Recommended Build Priority

#	Priority	Alert	Reason
1	■ Critical	Zero Stock Alert	Immediate revenue impact — shelves empty

2	■ Critical	Negative Stock Alert	Data integrity — already exists in your data
3	■ Critical	Sales Drop % Alert	Fully automatic — no manual threshold needed
4	■ Critical	Best Sellers Low Stock	Highest revenue risk items
5	■ Important	Dead Inventory Alert	Free up cash and storage space
6	■ Important	Urgent Reorder (Combined)	Most business-critical combined alert
7	■ Important	Store Health Score	Management overview for Head Office
8	■ Important	Weekly + Monthly Reports	Routine operations and trend analysis
